Karl

This Week

- File Managing in C
- File Managing in Cocoa

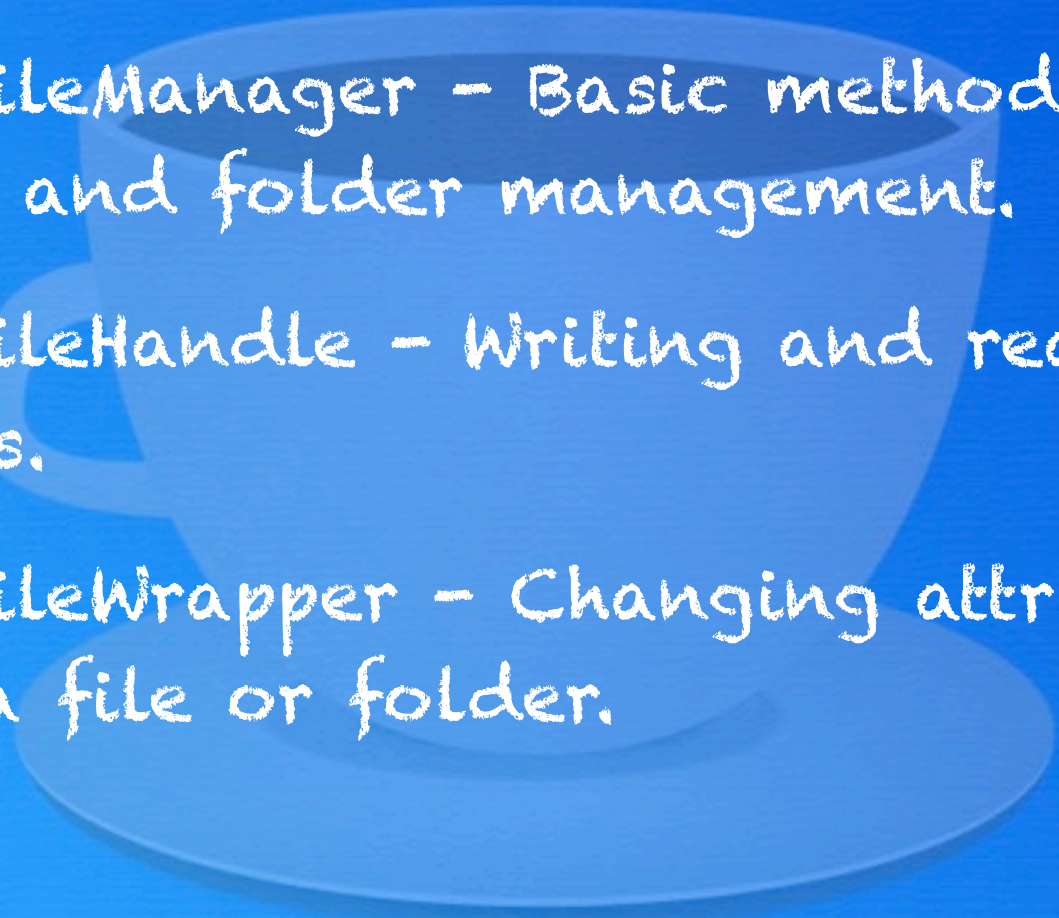
C Functions for Files

- FILE *fopen(char *Path, char *Mode); - Open a file.
- int fread(char *Buffer, int BufferSize, int amount, FILE *File); - Reads from a file.
- int fprintf(FILE *File, char *Format, ...); - Prints a string into a file.

C Functions 2

- int fclose(FILE *File); - Close a file.
- int remove(char *Path); - Deletes a file or folder.
- int rename(char *Path, char *Path2); - Renames a file or folder.
- feof(FILE *File); - Checks if it's the end of a file.

Cocoa Classes



- NSFileManager - Basic methods for file and folder management.
- NSFileHandle - Writing and reading files.
- NSFileWrapper - Changing attributes of a file or folder.

Cocoa Maker

Learn Objective-C

- If you have questions, please email me at cocoa@mrgeckosmedia.com and I will ether answer over email or on the podcast.
- If you would like to teach a lesson or join the podcast, email me as well with details on what you would like to do and I'll see what I can do.
